

# HAIR GROW

REGENERATIVE • HAIR DENSITY • SCALP HEALTH

## Hair peptide complex including GHK-Cu

RETROEV HAIR GROW is a professional scalp serum for fuller, stronger-looking hair.

Formulated with a sophisticated blend of biomimetic peptides, Copper Tripeptide-1 (GHK-Cu), Biotinoyl Tripeptide-1, Sodium DNA (PDRN), hyaluronic acid and advanced conditioning agents, it is designed to deliver intensive hydration while helping optimise the appearance and vitality of the scalp and hair.

The lightweight formula combines multiple signalling peptides with moisture-binding ingredients to help support the scalp barrier, improve conditioning, and promote an environment conducive to healthier-looking hair growth.

## HOW TO USE

Like all other RETRO EV bioscience formulas, HAIR GROW is designed to be combined with non-invasive clinical procedures such as microneedling or electroportation therapy.

|   |                                                                                                                                                                                                                                                                                    |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | <b>Prepare the scalp.</b> Cleanse the area to remove sebum, styling products and impurities.                                                                                                                                                                                       |
| 2 | <b>Dispense the serum.</b> Withdraw RETROEV HAIR GROW into a sterile syringe (2.5–5 mL)                                                                                                                                                                                            |
| 3 | <b>Divide the scalp into manageable treatment zones</b> using a comb. One section at a time, apply a thin layer of serum along the exposed scalp, and work over the area using your chosen transdermal delivery technique. Reapply serum as needed to maintain glide and coverage. |

To maximise results, we recommend patients complement their in-clinic treatments with at-home routines.
