

ACTIVA

SKIN ELASTICITY • HYDRATION • BRIGHTENING

A vitamin and peptide rich serum that elevates all others

ACTIVA is a bio-active serum that can be paired with other RETROEV serums. It is especially recommended to be used in place of normal saline to dissolve the EXO-DERMA and EXO-HAIR lyophilized powder Exosomes. This is due to the key ingredients packed into each vial:

A complex of 18 Amino Acids (low molecular weighted)
Skin boosting actives such as Hyaluronic Acid and Sodium DNA.
A trio of peptides that work to improve skin firmness, hydration, and overall youthful appearance:

- Copper Tripeptide-1: Boosts collagen production, supports wound healing, and improves skin elasticity.
- Palmitoyl Tripeptide-5: Helps protect the skin from damage caused by free radicals that cause aging.
- Acetyl Hexapeptide-8: Often called “Botox in a bottle,” it helps relax facial muscles, reducing expression lines and wrinkles.

HOW TO USE

Like all other RETROEV bioscience formulas, ACTIVA is designed to be combined with non-invasive clinical procedures such as microneedling or electroporation therapy. It can also be used as a topical serum post-laser.

	(If mixing with EXO-DERMA or EXO-HAIR, follow the instructions on the relevant product sheet)
1	Withdraw 2.5ml of ACTIVA using a syringe or attach the dropper cap included in the box.
2	Apply the ACTIVA solution to one treatment zone at a time before going over with your treatment tool of choice, ensuring to massage manually with fingertips for absorption
3	Allow to dry before applying your chosen post-treatment cream

To maximise results, we recommend patients complement their in-clinic treatments with at-home routines.
